

Windows Server 2008 & SQL Server 2008 End-of-Life: Ensure a smooth transition to the Azure cloud with NTT's end-to-end Managed Services

Microsoft will stop support for SQL Server 2008/2008 R2 and Windows Server 2008/2008 R2 within the next 6 months. This means any un-modernised systems will be left without regular security updates, the perfect environment for cyber attacks and threats.

An experienced Managed Services Provider like NTT will help you plan and execute your Windows and SQL 08 migrations to the Azure Cloud. After the initial migration, the team will ensure your environment is kept available, optimized and secure 24x7.

NTT offers

An end-to-end hybrid IT approach from a next generation Managed Services Provider

We offer full support throughout a customer's entire end-to-end digital transformation journey, providing businesses with either private and Azure public cloud management, or a hybrid mixture of both.

Post migration support and management

Including upgrading to newer versions such as SQL Server 2017 or Windows Server 2016 which utilizes the rich set of platform and data services available in the Azure cloud.

Expert ability to accelerate Azure cloud adoption

Next-Gen tooling and processes

An advance skill set

80+ Azure Certified Engineers (globally)

Enterprise Level delivery

Taking into account the complexity and compliance requirements of the customer

Gold Cloud Platform

- Microsoft Gold Cloud Platform Competency
- Azure Stack Early Adopter
- Carrying 40% of the world's internet traffic - Tier 1 IP network & NTT global SD-WAN
- Presence in 57 countries & regions across 5 continents
- Mitigating 2bn security threats every year

Strengthening the relationship between NTT and European DataWarehouse by managing its digital transformation journey to the Azure Cloud

Europe's first centralized data repository founded for the purpose of facilitating risk assessment & improving transparency in European Asset-Backed Security (ABS) deals.

NTT reduced the customer's dependency on Windows Server 2008 workloads, which would soon be reaching end of life, by moving and modernising critical apps onto newer operating systems hosted on the Azure public cloud. This was done with a consultative approach to planning, assessment, execution & ongoing management.

If you have Windows Server 2008/SQL Server 2008 workloads in your estate and would be interested in realising the benefits of extended Microsoft support by migrating to the Azure cloud, NTT can provide a consultation including a review of your infrastructure and an initial plan to begin your transformational journey.
